

## **We are a COVID safe hospital**

The year 2020 marked 75 years of excellence in patient care for Breach Candy Hospital Trust. We proved this, in no better way than to continue serving our patients during the COVID 19 pandemic, looking after both COVID and non COVID patients. We are leaders in prevention of hospital infections and right from the beginning we had chalked out clear pathways for managing our NonCOVID patients and all our doctors and nurses practiced the best infection control protocols to ensure that their patients were safe. This was further validated when Breach Candy Hospital (BCH) was the only hospital in South Mumbai, which was not shut down by BMC during the 1<sup>st</sup> wave of the pandemic.

Being at BCH always had an advantage because patients did not need to hunt for another hospital transfer even if they were incidentally diagnosed as COVID. At the same time, we ensured that all our Non-COVID patients had separate dedicated wards, ICUs, blood collection area as well as separate imaging area with dedicated staff managing these areas. We also ensured separate access to the wards for COVID and Non- COVID patients.

Our health care staff are vaccinated against COVID-19

The World Health Organization has pointed out that Non-COVID illnesses were greatly neglected during the pandemic and urges healthcare facilities to ensure Non-Covid diseases are given adequate attention. While most hospitals have chosen to be either COVID or Non-COVID, we have managed Non-COVID patients with great success all through, continuing with both medical and surgical services.

With the experience over the last 1.5 years, we assure you A COVID SAFE ENVIRONMENT. We benchmark ourselves to international patient safety standards. We remain committed to safe patient care and our motto is “Here, at whatever hour you come, you will find light, help, care and human kindness”.
